

Partner with Your Primary Care Provider to Better Manage Your Diabetes

Each year, 1.5 million new cases of diabetes are diagnosed.*

If you or someone you know is living with diabetes, a primary care provider can help manage this condition.

Schedule a visit with your PCP, who will:

- Explain your numbers: blood pressure, cholesterol levels, blood sugar level and body mass index.
- Help provide resources for making healthy food choices (lower carb options).
- Suggest adding exercise to your day. Small steps each day add up. Light walking is a great place to start.
- Offer treatment therapies that can better control your condition.

Use this handy chart to print out and keep track of your results.

Test or Exam	When to Have It**	My Results
Hemoglobin A1c	2 to 4 times a year	
Blood Pressure	each visit	
Cholesterol Levels	once a year	
Body Mass Index	every visit or at least once a year	
Dilated Eye Exam	every 1 to 2 years	
Urine for Protein	once a year	
Foot Exam	each visit
