

Assess your stress

Do you feel stressed out? Use the *Holmes and Rahe Stress Scale* to see how much stress is affecting your health. This assessment was developed by two mental health experts to determine whether stressful life events cause illnesses.

Put a check mark by the *Life Events* that you've experienced in the past year. Once you have completed the scale, tally your *Life Change Units*. Compare your total score with results on the following page.

Life Event	Event Affects You	Life Change Units
Death of a spouse/partner		100

Compare your results

Score of less than 150: Your stress level is low, which means your chance of getting a stress-related illness within the next couple of years is low. Keep in mind that any change in your life could increase your stress level, so continue to practice stress management techniques.

Score of 150-299: You have borderline stress, so it's time to start taking care of yourself. Your stress level puts you at risk for developing stress-related illnesses within the next year or two. Start using management techniques to help lower your stress. Find helpful resources from Blue Access® for Members. The Personal Health Manager's *Ask A Life Coach* feature can provide additional support and answers to stress-related questions.

Score of 300 or more: Your stress level is high, and your chance of getting stress-related illnesses is great. Please discuss results of this assessment with your doctor.

Taking this quiz can give you some insight into potential stress-related risks that affect your health and well-being. But keep in mind, these are just predictions—they're not absolute. Health changes stem from various factors, including how significant those life events are to you, your ability to cope with change and the available support through family, work and friends.
